Improvement plan for MO8006 – NWP&DA – Course

Abdel Hannachi, MISU

The course lectures and labs were overall enjoyed by the student, who was satisfied with most aspects of the course.

Kristofer, Erland and myself had a stretched discussion with the student who provided some constructive feedback that could improve the course. One point discussed is related to spreading the labs apart over the course period. Another point is perhaps to smooth a bit the maths. The introduction should include more material on the labs, and the objective of the course could be improved. More literature would be favoured.
