Improvement plan for MO8010 BL & Turbulence Course

Abdel Hannachi, MISU

The course lectures, labs and tutorials were overall enjoyed by the students. The students were satisfied with most aspects of the course.

I had a stretched discussion with the students, who provided some constructive comments that could improve the course. One point discussed is related to the course organization. This is to do mainly with the time given to the students to prepare their lab report. Basically, the students wanted more time. I will consider in the future to give the students a few more days to complete their lab report.

Another point was also brought up by the students related to the literature material. Some students find that Garratt's textbook is a bit difficult to follow. They find that Stull's book, which is available in the library, is convenient. I will consider including Stull's book as a complementary reading material.
