

MO8007_VT18

Answer Count: 4

1. What was the best aspect of the course?

What was the best aspect of the course?

To combine the theoretical knowledge with the practical lab sessions.

2. What improvements would you suggest in the course?

What improvements would you suggest in the course?

Although I really liked the lab work I feel that the lab take a lot of time and that means that the theory is then put aside by students however the course grade is 100% test and that is theoretical. Lab work was taking too much time away from theory.

Info up on mondo.

Info about extra lab sessions never came up on mondo, or the like.

I think this is the best way to teach this course. So no improvements needed at least according to me.

3. What advice would you like to give to future course participants?

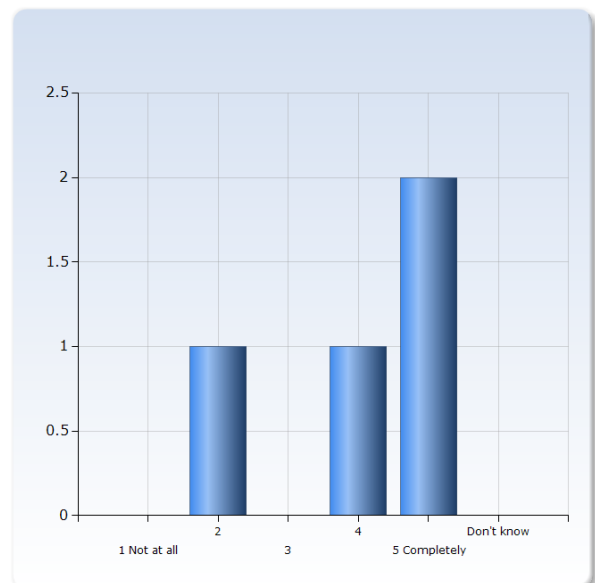

What advice would you like to give to future course participants?

Please attend this course and try to learn the different finite difference schemes and their stability criteria. Because it will give you a first hand experience how a 3-D ocean/atmosphere model works in reality.

Comment on the teaching

The course is well structured and the lectures followed the lecture plan, however inside each lecture the teacher seemed a little disorganized and not sure what he was going to go over in each lecture.

"no that is wrong" then walking away is NOT helpful.

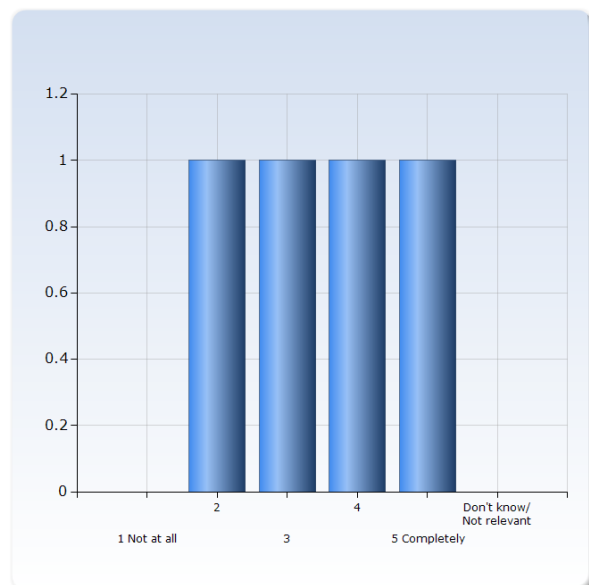

If a student seems to be very far off in "confusion land", answering to questions in riddles either by mail or in person is only going to add to this and will not help. Then it is better to say this here is wrong and is supposed to be this, not that. Giving subtle hints to what or where the problem might be is not helping, and if the labs are supposed to be in before deadline and not after this is the right kind of approach.

A guessing game of what the answer you get of what is wrong is never helpful and then it is better not to answer at all in that case.

10. Administration and study environment

I felt that the course was well organized
