2. What was the best aspect of the course?

What was the best aspect of the course?

I loved the exercises. I would have liked to have more of them.

Inga's course summary was very good (if a bit hard to read at times).

The excursion to Askö was a good learning experience and very appreciated. It was a very good to get some experience of how measurements are taken.

The cruise provided an exiting hands-on experience in how oceanographic measurements are performed.

The cruise trip was very cool, providing very good opportunities to combine practical experience with theoretical knowledge.

3. What improvements would you suggest?

What improvements would you suggest?

More exercises.

Tweaking the course so that no content is left out and "not used".

Maybe a more specific introduction before the cruise; better time arrangement between the exercises and the lectures.

4. Was the level of the course content adequate?

Was the level of the course content adequate?

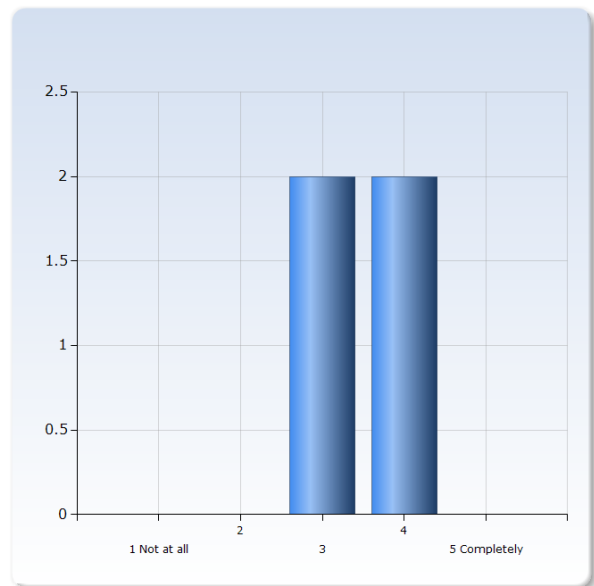

Yes.

In a pure math aspect the level was adequate.

Yes

5. The course was well structured

Comments

It was noticeable that this was the first time the course was given in this format. There were some timing issues and some mismatch between lectures and exercises but Inga worked hard to make up for that.

The course was changed a bit from how it was previously and an unsure structure is likely to be an early problem only.

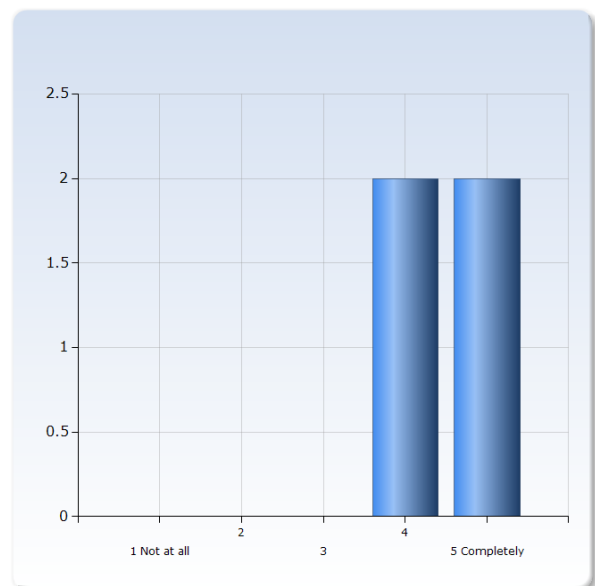

6. The course prerequisites were sufficient to follow the course

9. Were the lectures easy to follow? Were they instructive? You are welcome to comment on specific lectures or parts of the course.

Lectures were good and for the most part easy to follow. I had problem when things got messy or "advanced tricks" were used. At those times and had to chose between paying attention and understanding the procedure or keep good notes. I tried to pay attention and thus skipped on the note taking at those times. This made reiteration and studying at later stages more difficult though. However the summary with derivations that Inga posted towards the end of the course were great. I think it would help a lot if derivations and neat lecture notes were posted lecture by lecture as the course goes on. of course, this could mean that some students would think that they wouldn't have to attend the lectures "since they already have the notes". But, hey, their loss.

Lectures were easy to follow.

Yes;Yes

10. Were the home assignments useful?

Were the home assignments useful?

Yes, but I felt they took more time than they returned in learning and understanding. Would have preferred slightly less home assignments and more exercises.

Can't think of any home assignments we had. The lab report was one thing but we talked to Inga about that in person.

Yes
